

1. LIGHT STEEL ADVANTAGES

- Built has a fast and economical building process.
- The construction process is not affected by climate conditions.
- It provides high energy efficiency with different and economical solutions for different climatic conditions.
- It is the most resistant structure system known to earthquakes in the world.
- It can be built even in the worst ground conditions due to its lightness.
- It is a system implemented in all countries that accept international standards.
- It has unique advantages in energy efficiency and sustainability issues.
- It provides great convenience and flexibility in architectural, electrical and mechanical solutions.
- It offers users high building physics opportunities. (Heat, sound, humidity, daylight factors such as)
- It lasts much longer.
- The tie-bar-less and barrel-free design provides interior and decoration comfort and offers spacious and more spacious interiors.
- It is the most suitable solution for the construction of places with healthy indoor air quality.
- The construction site does not affect the quality of the environment and social life.
- Minimizes environmental and minimum water consumption during construction and reduces the risk of water resources and groundwater contamination.
- Recyclable material is 90% or more.
